

## Bovine Viral Diarrhoea (BVD) Antibody Virus Neutralisation Titre (VNT)

If cattle are suspected as having been infected with BVD virus, a VNT can be used on paired convalescent sera. This is a more expensive test than other BVD testing options and not used as frequently now the BVD antibody ELISA is a quantitative test.

See also "Bovine Viral Diarrhoea (BVD) Testing Guidelines".

Species:  
Bovine

Specimen:  
Serum ( 10ml )

Container:  
Plain or gel tube

Collection  
Protocol:  
Standard  
venepuncture
