

Faecal Puppy Panel

Early detection for a healthier pet

A puppy's health in the first few months of life dramatically impacts on its early development and lifetime wellbeing. You no doubt have experienced a client bringing in a new puppy suffering from one or more of the following:

- diarrhoea
- vomiting
- abdominal pain and distension
- weight loss
- ill-thrift

To help you with the early detection of typical puppy problems, Gribbles Veterinary Pathology has designed a Puppy Panel.

The Puppy Panel tests for the following:

- Parvovirus
- Endoparasites
- Giardia

 **Species:**
Canine

 **Specimen:**
Faeces
(Min 1g faeces)

 **Container:**
Sterile yellow top collection pot.

To order a Faecal Puppy Panel please send required samples to Gribbles along with your submission form (available to download at gribblesvets.com.au/veterinarians/ordering-a-test). Please write Faecal Puppy Panel (code 3779) in testing instructions.
